INTRODUCTION

Shrimps of the genus Callianassa occur abundantly in Westernport. They are of known ecological significance, forming an important item in the diet of the King George Whiting (Robertson 1977),and have therefore been the subject of a number of toxicological studies on Westernport fauna (Tasks T602, T608, T706). However, detailed information on the distribution of Callianassa species in Westernport has not previously been available. The present survey was therefore undertaken to provide this information. In addition, heavy metal analyses, for zinc, cadmium, copper and lead were undertaken to provide data on levels occurring in Westernport Callianassa, and to indicate inter- or intra-specific differences.

MATERIALS AND METHODS

A map of Westernport was divided into nine strata based on sediment type (Shepard classification, Ministry for Conservation 1975 fig 4.1 4.(b)). Ninety-seven stations were randomly allocated to these strata, each stratum receiving a number of stations proportional to its area. (fig. 1). Stations in East Arm were sampled in April 1977 and those in North Arm, and to the north of French Island, in October 1977.

At each station, depth, the amount of vegetation cover and the nature of the sediment were noted. Sediment, to a depth of about 40 cm, was removed by divers from five $0.1\ m^2$ quadrats and sieved, on board ship, through a 2 mm mesh. Live Callianassa were removed from the mesh and frozen.

Specimens were identified in the laboratory. They were freeze-dried and digested at low temperature with a mixture of nitric and perchloric acids. Heavy metals were determined on a Perkin-Elmer Model 400 Atomic Absorption Spectrophotometer and/or an Environmental Science Associates Model 2014 Anodic Stripping Voltameter.

Where individual shrimps were too small for analysis, aggregate samples were used. Aggregates were of shrimps from the same station, of the same species and, as far as possible, of the same sex.

etc
(see index)

J (pp. 1 - 150)

Class: CRUSTACEA

- Branchiopoda
- Cephalocarida
- Ostracoda
- Mystacocarida
- Copepoda
- Branchiura
- Cirripedia
- Malacostraca
  - Nebaliacea
  - Anaspidacea
  - Mysidacea
  - Thermosbaenacea
  - Spelaeogriphacea
  - Lophogastridea
  - Cumacea
  - Tanaidacea
  - Isopoda
  - Amphipoda
  - Euphausiacea
  - Decapoda
  - Stomatopoda

Classification based on R.E. Blackwelder 'Classification of the Animal Kingdom' 1963.

K (pp. 151 - 300)

Phylum: TARDIGRADA

- Class: Heterotardigrada
- Eutardigrada

Phylum: PENTASTOMIDA

- Class: Linguatulida

Phylum: ONICHOPHORA

- Class: Peripatidea

Phylum: ARTHROPODA

- Class: Merostomata
  - Order: Xiphosuridae
- Class: Pycnogonida
  - Order: Eupantopoda
- Class: Arachnida
  - Order: Scorpionida
  - Pseudoscorpionida
  - Phalangida
  - Acarida
  - Palpigradida
  - Thelyphonida
  - Schizomida
  - Phrynichida
  - Araneida
  - Solpugida
  - Ricinuleida
- Class: Pauropoda
  - Heterognatha
- Class: Symphyla
  - Cephalostigmata
- Class: Diplopoda
  - Pselaphognatha
  - Chilognatha
- Class: Chilopoda
  - Pleurostigmophora
  - Notostigmophora

DROMIIDAE

J739 *Dromidiopsis excavata* (1) det D.J. Griffin & J.C. Yaldwyn 1967

Port Phillip Bay Area 58 1½miles of Rye Pier, sand & broken shell, 7 fathoms, 16.2.1963. Coll: T. Crawford.

J740 *Dromidiopsis excavata* (1)

Carrum Vic. Presented by Donald Macdonald, Esq "Argus" Office. 26.2.15 (Dromia ciliata).

J741 *Dromidiopsis excavata* (1) shaggy sponge crab.

Portland, Vic. 38 feet.
Coll: C.F. Kuntze. 7.1959

J742 *Dromidiopsis excavata* (1) det. D.J. Griffin & J.C. Yaldwyn Nov 1967.
Port Phillip Bay Area 66. Living on Ascidian. 15.1.1957.

J743 *Petalomera wilsoni* (1) det. D.J. Griffin & J.C. Yaldwyn. Nov 1967.
Pier 2 Portland, Victoria from Bryozoa. c/19.
Coll: J.E. Watson 9.6.63.

J744 *Dromidiopsis excavata* (1)

Investigator Strait. SA stn x 2.
Coll: J.E. Watson 1.1.1971

J745 *Dromidiopsis excavata* (1)

Rosebud, Victoria. Port Phillip Bay. Coll: S. Matlock 20.2.1970.

J746 *Dromidiopsis excavata* (1)

"Trash-fish, Yarraville shoal" South Australia "Dinjarra".
Coll: K.L.B. SA Museum 4.4.1972.

J747 *Dromidiopsis excavata* (1) det D.J.Griffin & J.C.Yaldwyn Nov. 1967
Port Phillip Bay, Area 31. Near Prince George Light.
In red sponge. 50' 1.9.1950.

J748 *Dromidiopsis excavata* (1)

37°55'S 148°17½E 26 Fathoms. Vic. 15.2.1971
403 Coll: E. Gippsland Scallop Survey.

J749 *Dromidiopsis excavata* (1)

Pt Sinclair. Sth. Aust. coral, sponge & mud bottom.
20 fathoms. Coll: N. Pearsons. 20.7.74

J750 *Dromidiopsis excavata* (1) det D.J.Griffin & J.C.Yaldwyn Nov 1967
Area 10 Port Phillip Bay. Coll: 23.6.1957.
